

Bookingintelligence

The latest innovation from **sgfleet**

sgfleet has developed **bookingintelligence** - a resource management application that enables the management of pools of resources online

bookingintelligence caters for the management of a wide range of "Resources" including:

- ✓ Vehicles e.g. Pool Cars
- ✓ People - the system allows for an Employee/Contractor to be a resource type to enable their schedule to be managed
- ✓ Meeting Rooms
- ✓ Fuel Cards and Toll Tags
- ✓ Parking Spaces and much more...

Bookingintelligence also has multiple views to allow both a detailed summary view or a quick snapshot of the entire resource pool

The solution has been designed to enable access to the system from any device including iPhone, iPad and Android device

As managing pools of resources can be complex and logistically challenging, bookingintelligence has a sophisticated booking engine that enables the user to easily select the right resources to meet the requirements of the booking request.
